

2.1 ContentCleanup™

by ContentWatch

Remove Unwanted Or Uninvited Files From Your PC

ContentCleanup™ is a simple-to-use tool that will help you identify, verify and erase unwanted content from your computer. Most unwanted files are often in the form of hidden files or “cookies” and are difficult to identify and locate, and are almost impossible to delete. You may also have other files—not necessarily objectionable—that you wish to delete, which may be difficult to find. *ContentCleanup™* can solve these problems, plus help free up valuable disk space on your hard drive; improving the performance of your PC. With *ContentCleanup™*, you gain peace of mind that your Internet experience won't be compromised by uninvited content.

Why do you need ContentCleanup™?

Your computer may contain hidden files left behind from Internet surfing. Frequently as you surf the Web, sites that you visit “push” information onto your computer without you knowing it and without your approval. In many cases, this content is objectionable. *ContentCleanup™* helps you safely detect and delete unwanted or objectionable files on your PC. With *ContentCleanup™*, you can periodically scan your computer system to ensure that it does not contain objectionable content.

How does ContentCleanup™ work?

ContentCleanup™ starts by running a scan (Audit) on your computer system. It identifies the files on your computer that may be objectionable, categorizing each of these files types as “History,” “Temporary Internet” files, “Cookies,” or “Documents.” Additionally, Audit further analyzes the files and categorizes them into 28 different content categories (see categorization below). You can open each entry by double-clicking. If you wish to delete that entry, simply select it and click the “delete” icon. *ContentCleanup™* identifies some entries as being “highly risk” or objectionable files. These can be deleted or saved for later review.

Features/Benefits

Comprehensive Scan – The scan engine in ContentCleanup is the same dynamic analysis engine used in ContentWatch's #1 rated Internet filtering product-ContentProtect. The dynamic analysis engine has the ability to scan and categorize each file-type based on its content, where it came from, and several other factors.

Thumbnail View – Allows you to view each file in a “thumbnail view” to determine if it is suitable to view before opening the file for further inspection.

Blur Technology – Allows you to view images in a “blurred” mode so you avoid exposure to objectionable or questionable images.

New File Types – ContentCleanup will scan and categorize all Internet related files including, Images, Video, Audio, Text, and Program files.

Categorization – ContentCleanup analyzes every file on your computer and categorizes each questionable file by content category. These categories include: Adult/Mature, Chat Site, Drugs/Alcohol, Email, Employment/Career, Family Resources, Financial/Stocks, Gambling, Games, Government, Hate/Violence, Health/Medicine, Illegal Activities, Instructional, Intimate Apparel, Kids, Music/Entertainment, News, Personals, Pornography, Religious, Schools/Colleges, Search Engines/Portals, Shopping, Sports and Travel.

Hold Items – Enables you to move objectionable items to an encrypted quarantine folder for later review or deletion.

Reporting – Allows you to view an enhanced summary of each scan through the use of Flash technology. Our reports detail by type and category, the number of items found, items quarantined, and items deleted.

Advanced Options – Enables you to conduct a more thorough scan. You can specify the types of files you want to scan, specify the location, and/or include size restraints.

Displays Files – You choose to display files by file type including: images, video, audio, Internet history, cache, cookies, and temporary Internet files.

ContentCleanup Wizard – Suggests which files are safe to delete and allows you to control the removal of files.

Computer Performance – Enhances PC performance by freeing up disk space.

Product Data Sheet

System Requirements

- PC or Compatible 133 MHz or faster processor
- Microsoft Windows 2000/XP
- 128 MB ram minimum, 256 MB ram recommended
- 25 MB hard drive space
- Color monitor with a minimum 800x600 resolution
- Internet connection
