

# 2.1 ContentProtect™

home suite

## Product Data Sheet

**3 great Internet Protection tools — 1 great value!** Protect your family on the Internet from inappropriate content. ContentProtect Home Suite gives you a fully integrated suite of Internet Protection tools including:

- ContentProtect™** — The industry's leading Internet filtering software
- ContentCleanup™** — The ability to analyze your hard drive, categorize content and then remove unwanted files from your PC
- Privacy Protection** — Protection from fraudulent and online phishing scams

### System Requirements

- PC or Compatible 133 MHz or faster processor
- Microsoft Windows 2000/XP
- 128 MB ram minimum, 256 MB ram recommended
- 25 MB hard drive space
- CD-ROM drive
- Color monitor with a minimum 800x600 resolution
- Internet connection
- Internet Explorer 4.0 or greater, Netscape 6.0 or greater or other current web browser

### Features/Benefits of Individual Modules

*ContentProtect™* is the most effective and flexible Internet filter available today! The state-of-the-art dynamic filtering engine ensures that your family members won't be exposed to pornography and other offensive content.

*ContentProtect™* is the only family-oriented filter that allows you to manage your home Internet use from anywhere at any time through powerful Remote Management tools. ContentProtect can be used as configured right "out of the box" or you can adjust the filter settings according to your personal preferences and needs.

of children. Reports track where, when and how often children visit certain Web sites by category.

- **Time Management** – ContentProtect includes a powerful time management feature that permits parents to set the time of day when children can access the Internet as well as a time quota feature that permits administrators to assign a block of time to a child. Once that child's time quota is used up, they can no longer access the Internet.

- **Customized Lists** – ContentProtect permits parents to create customized lists of unacceptable or acceptable Web sites. For example, parents could set up a list (white list) of friendly sites that don't necessarily get filtered.

### Features/Benefits

- **#1 Rated Internet Filter** – Internetfilterreview.com; Filterguide.com
- **Integration With Popular Search Engines** – ContentProtect leverages "Safe Search" type options found in popular search engines such as Google, Yahoo, Dogpile, AltaVista, Lycos, AllTheWeb, and MSN. This new feature will enable better protection against pornographic images when doing an image only search.
- **Remote Management** – Powerful Remote Management tools exist to help parents to manage and maintain Internet policies remotely; for example, from work if Internet access exists.
- **Enhanced Reporting** – ContentProtect reports have been enhanced through the use of Flash technology. Reports are dynamic in nature and provide parents with a first class presentation of Internet activity

- **Email Notifications** – Parents can be notified via email when children are blocked, warned or try to violate or override the defined Internet Policy.

- **Instant Messaging** – ContentProtect provides better tools for managing access to popular Instant Messaging applications. ContentProtect also records IM sessions so that parents can review the dialog that takes places between children, friends and potential predators.

- **Internet Game Management** – ContentProtect permits parents to block access to certain Internet games..

- **Peer-to-Peer Management** – ContentProtect permits parents to block access to certain Peer-to-peer (P2P) sites.

- **Customization** – ContentProtect is highly customizable permitting each family member to have their own filtering settings, rather than forcing them into a “one size fits all.”
- **Multi-Language Support** – ContentProtect now localized and filters Internet content in multiple languages including English, Chinese and Spanish.

**ContentCleanup™**

This simple-to-use tool helps users analyze, categorize and erase unwanted content from their computers. ContentCleanup starts by running a comprehensive scan on the user’s computer and categorizes them in file types: History, Cookies, Documents, Temporary Internet files, Images, Audio, and Video. In addition, ContentCleanup further analyzes each file in depth using ContentProtect’s award-winning and patent-pending dynamic analysis engine which identifies potentially objectionable files and categorizes them into one of 28 different content categories, ranging from Pornography or Adult/Mature to Sports and Travel. By doing this, it enables the user to easily identify objectionable files and delete them; freeing up disk space on the user’s computer and enhancing its performance.

**Features/Benefits**

- Scan and categorize each file-type based on its content and where it came from.
- View each file in a “thumbnail view” to determine if it is suitable to view before opening the file for further inspection.
- View images in a “blurred” mode so you avoid exposure to objectionable or questionable images.
- ContentCleanup scans, analyzes and categorizes every file on your computer including Images, Video, Audio, Text, and Program files.
- Move objectionable items to an encrypted quarantine folder for later review or deletion.
- View an enhanced summary of each scan through the use of Flash technology. Reports detail by type and category the number of items found, items quarantined, and items deleted.
- Specify the types of files you want to scan, specify the location, and/or include size restraints.
- Control the removal of files through our Cleanup Wizard.
- Enhances PC performance by freeing up disk space.

**Privacy Protection**

Powered by CallingID, Privacy Protection warns users of potentially dangerous Web sites by verifying information about the site’s ownership including its origin, date created, and any other pertinent information concerning the legitimacy of the Web site. If any information is suspicious, a visual warning will appear to inform the user. Other features of the product include:

**Features/Benefits**

- **Site Verifications** – Verifies safe sites before users do business with them
- **Verification Tests** – Executes 52 verification tests on each page users visit and provides them with simple easy, to understand risk.
- **Site Warning** – Choose between two different methods of warning users about suspicious sites: foreground message box, or background pop-up window.
- **Configurable Warning Level** – Choose to warn users of either or both “High Risk” and “Low Risk” suspicious sites.

**Support**

ContentProtect Home Suite is backed by toll-free technical support and email support.

**Automatic Updates**

With state-of-the-art technology, ContentWatch updates users with the latest lists, definitions, and technology, as they become available. This process can happen automatically or manually depending on the user preference enabling the customer to have the most current version of the software available.

ContentProtect blocks and filters on 28 different categories. According to your own preferences and standards, you can easily adjust our filter to either permit or block access to certain Web content.

ContentCleanup’s Thumbnail and Blur view enables you to view potentially objectionable image files in a non-threatening way.
